

## Butterfly Valve Application Knowns

- 1) 1 What is the process line size (or type) ?
  
- 2) What is the material the valve will be handling ?
  
- 3) What is the process line pressure and temperature ?
  
- 4) Does the application require wafer or lugged body ?
  
- 5) What material of construction (what it is made of) does the application require for the body, disc and seat ? DOES IT NEED TO BE FULLY LINED??
  
- 6) What kind of an actuator does the valve need to have (manual, air actuator, electric) ?
  
- 7) If an air actuator is requested, what is their air supply pressure ? Does it require a fail position? Does it need a solenoid valve? Does it need limit switches? What NEMA class do they require? ARE THEY THROTTLING WITH THIS VALVE?
  
- 8) If an electric actuator is requested, what is their supply voltage(24VDC; 120VAC) ? Do they require a fail position? Does it need an internal heater(outside application)? What NEMA class does it require? ARE YOU THROTTLING WITH THIS VALVE?
