

## Control Valve Application Knowns

( We have both rotary and globe style control valves)

- 1) What is the process line size (or type) ?
- 2) What is the material the valve will be handling ?
- 3) What is the process line pressure and temperature ?
- 4) Does the Application require wafer or flanged body ?
- 5) What material of construction (what it is made of) does the application require for the body, disc and seat ?
- 6) What is the flow rate required (CV value) ?
- 7) If an air actuator is requested, what is their air supply pressure ? Does it require a fail position? Does it need a solenoid valve? Does it need limit switches? What NEMA class does it require?
- 8) If an electric actuator is requested, what is the supply voltage (24VDC; 120VAC)? Does it require a fail position? Does it need an internal heater (outside application)? What NEMA class does it require?
